INTRO

Staff Blockchain Engineer with 15+ years of software engineering experience. Currently building cryptocurrency infrastructure at scale: payment rails serving millions of users and custody platforms safeguarding billions in client assets. Deep applied-cryptography specialization (MPC, threshold signatures, HSMs, offline key management). Prior tenure in defense systems and financial-data engineering.

WORK EXPERIENCE

Independent Consulting

Staff Blockchain Engineer - Remote

Jan 2017 – Present

- Engineer features on a digital-asset custody platform safeguarding billions of dollars worth of client crypto, built on an MPC threshold signature approval scheme, HSM-backed key management, and cold signing architecture
- Build payment infrastructure (deposits, withdrawals, on/off-ramps) for a top-tier cryptocurrency exchange serving millions of users worldwide
- Develop fund-management infrastructure for the exchange's operational wallets — hot wallet operations, cold storage reserves, and rebalancing flows between them
- Maintain critical-asset integration code (BTC, ETH, etc.) across custody and exchange platforms; ship capabilities enabling rapid onboarding of new asset classes
- Delivered end-to-end Lightning Network integration at the exchange — development, infrastructure, testing, deployment, and ongoing maintenance — a notable industry milestone enabling instant, low-cost Bitcoin payments
- Develop and audit smart contracts for exchange operations (e.g., batched ETH staking transactions) and evaluate third-party contracts before onboarding new assets

CACHE

Lead Blockchain Developer - Singapore

Dec 2018 – Dec 2021

- Developed smart contracts and APIs powering CACHE Gold and GramChain — a gold-backed token with best-in-class auditability and provenance
- Designed security models and cryptographic protocols (including offline signing) for safeguarding company assets and infrastructure
- Built merchant payment solutions and implemented automated trading algorithms for hedging strategies

Clevertech - Remote

Sep 2015 – Dec 2017

- **OTCmarkets.com Lead API Developer** (2017): Led engineering team redesigning realtime financial market data API into a scalable, responsive system
- **Pave.com Lead Engineer** (2016–2017): Split monolithic web app into microservices, migrated MongoDB to PostgreSQL, dockerized services on Kubernetes with Jenkins CI; primary developer for credit-worthiness scoring service processing 80+ risk factors
- **Genymotion API Developer** (2015–2016): Built GenyCloud MVP microservices (android emulator management, licensing, auth, API gateway); integrated Stripe and PayPal billing

Johns Hopkins University Applied Physics Lab

Software Engineer (Associate Professional Staff II) - Columbia, MD

Jun 2011 – May 2015

- Led video exploitation team delivering real-time encoding, decoding, storage, and dissemination for military-grade optical sensors
- Built low-level command and control interfaces to sensors and radar; developed automated detection and tracking algorithms for moving targets
- Logged 600+ on-site hours (80+ in military aircraft) supporting client delivery, training, and maintenance of deployed mission systems

International Business Machines (IBM)

Extreme Blue Intern - Austin, TX

May 2010 – Aug 2010

- Co-developed a runtime option for the Linux B-tree filesystem (btrfs) caching frequently accessed files to SSDs in hybrid storage pools (patent below)

EDUCATION

Johns Hopkins University, Baltimore, Maryland, USA

Master of Science in Applied Mathematics (M.S.)

Sep 2011 – May 2014

Virginia Tech, Blacksburg, Virginia, USA

Bachelor of Science (B.S.) in Computer Science

Bachelor of Science (B.S.) in Mathematics

Aug 2006 – May 2011

OPEN SOURCE

- **Bitcoin Core** — Contributor to the reference Bitcoin protocol implementation
- **c-lightning** — Contributor to a leading Lightning Network implementation

TECHNICAL SKILLS

Blockchain & Applied Cryptography: Deep knowledge of consensus protocols (PoW, PoS), blockchain architecture (UTXO, account, DAG), cold/hot fund management, HSM-backed key management, offline signing protocols, MPC and threshold signature schemes, key exchange protocols (ECDH, Noise framework), digital signature schemes (ECDSA, EdDSA, Schnorr, BLS), elliptic curve cryptography (secp256k1, ed25519, BLS12-381), smart contracts and auditing tools (Solidity)

Languages: JavaScript / TypeScript, Rust, Python, C / C++, Solidity

Infrastructure & DevOps: Docker, Kubernetes, CI/CD, Linux platform, command-line-first workflow (vim, bash, GNU toolchain), MariaDB, PostgreSQL, MongoDB, microservice architecture

Other technical domains: Applied mathematics, parallel computing, real-time video encoding/streaming, automated detection & tracking, sensor control interfaces, large-scale data analysis

PATENTS

Asset-Backed Cryptocurrency, SG Patent Pending PCT/SG2019/050228, Filed Apr 24, 2019

Conor Scott, Mingming Cao, Ben Chociej, Steven M. French, Matthew R. Lupfer, Steven L. Pratt. 2013. Hybrid data storage management taking into account input/output (I/O) priority, US Patent 20130073783, Filed Sep 15, 2011, Published Mar 21, 2013
